Reproducible Research - Storm Data

Abdul Rasheed Narejo

August 27, 2018

Introduction

Storms and other severe weather events can cause both public health and economic problems for communities and municipalities. Many severe events can result in fatalities, injuries, and property damage, and preventing such outcomes to the extent possible is a key concern.

This project involves exploring the U.S. National Oceanic and Atmospheric Administration's (NOAA) storm database. This database tracks characteristics of major storms and weather events in the United States, including when and where they occur, as well as estimates of any fatalities, injuries, and property damage.

Load required libraries

```
library(data.table)
library(R.utils) # to unzip the bz2 format file
library(dplyr) # load dplyr for data manipulation
library(ggthemes) # use themes to beautify graphs
library(ggplot2) # ggplot for data visualization
```

Loading and preprocessing the data

Load the data (read.csv())

```
url <- "https://d396qusza40orc.cloudfront.net/repdata%2Fdata%2FStormData.csv.bz2"
if (!file.exists("./stormData.csv.bz2")) {
    download.file(url, destfile = "./stormData.csv.bz2",
                  method = "curl",
                  mode = "web")
} else {
    message("file already exists!")
}

if (!file.exists("./stormData.csv")) {
    bunzip2("stormData.csv.bz2", "stormData.csv", remove = FALSE, skip = TRUE)
    message("Successfuly unzipped file")
}
```

```
## Successfuly unzipped file
```

```
stormData <- read.csv("stormData.csv")
save(stormData, file="stormData.RData")
```

```
head(stormData)
```

```
